BSC hosts the 7th Internacional Industrial Supercomputing Workshop

The IISW is an annual gathering of industrial partnership programs from leading HPC centres around the world.

The [International Industrial Supercomputing Workshop](#) is an annual gathering of industrial partnership programs from leading HPC centres around the world. These centres, which have traditionally been the

domain of government and academic users, have in recent years created programs and projects to help provide HPC systems and expertise to industry. A number of prominent studies indicate that supercomputing is critical to the competitiveness of industry. Benefits include reduced product development time, creation of higher quality products, and faster time to market. Via these series of workshops, leading HPC centres can share policies, strategic plans, success stories, and technical issues related to industrial supercomputing, broaden knowledge, and have an opportunity to expand industrial supercomputing service activities.

The main purpose of the workshop is to share policy/strategic plans, success stories, and technical issues related to industrial supercomputing with global leading supercomputing centres. These annual workshops provide invited attendees the opportunity to meet, share best practices and network in order to improve collaboration.
