Cluster management software and introduction to infiniband technology (Barcelona, May 2011)

For each cluster management software were presented its main features, e.g. massive deployment of nodes (supported methodologies, diskles...), dynamic modifications and updates in the operating systems of the nodes, management of nodes (start / stop / get console...) and monitoring services. Regarding Infiniband technology was provided a basic introduction to its operation and advantages.

The RES (Spanish Supercomputing Network) coordinated by BSC organized the Technical Training *Cluster management software and introduction to Infiniband* the 3rd and 4th May 2011 in Barcelona.
