

Horus

Horus is a python-based and web-based application which solves the many-software many-computer problem in a user-friendly way. Horus is the GUI built for your python scripts, as anyone can build Horus Plugins using its developer friendly HorusAPI. It has several features which make it appealing such as:

- Share your workflows: Flows are stored as a .flow file which contains all of the information of your calculations, variables, molecular structures...
- Configurable remotes: Configure as many SSH remote servers as you want. Blocks can connect to them in order to send calculations, transfer data...
- Many plugins: Download provided plugins or build your own. Plugins can include new blocks as well as additional views.

Barcelona Supercomputing Center - Centro Nacional de Supercomputación
