# BSC and HPC Solutions for companies

Technology Transfer Office

28/11/2017

# HPC and industrial sector

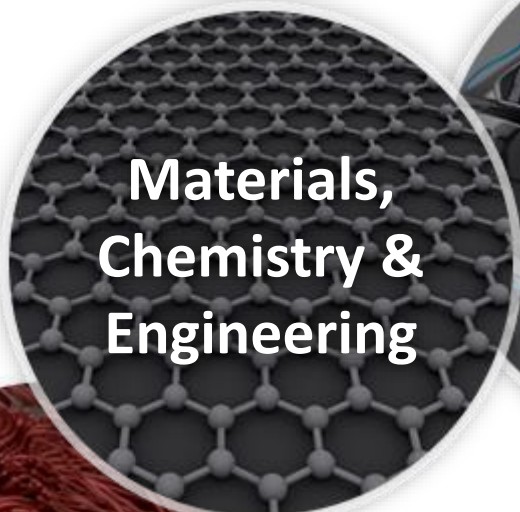

Many organizations are now using HPC as an essential part of their business strategy. HPC can help them **design new products**, **optimize manufacturing** and delivery processes, solve production problems, mine data, and **simulate processes**, all in an effort to become more competitive, profitable and “green”.

This is done by applying compute cycles in order to **solve problems in the fastest way possible**:

*A problem that would take days to solve on a laptop can be solved on a SUPERCOMPUTER in a few minutes*

# HPC: An enabler for all economic sectors

**Materials,  
Chemistry &  
Engineering**

**Computer-  
aided  
Engineering**

**Big Data**

**Bio Sciences  
& Medicine**

**Earth and  
Geo-  
Engineering**

## **Advances leading to:**

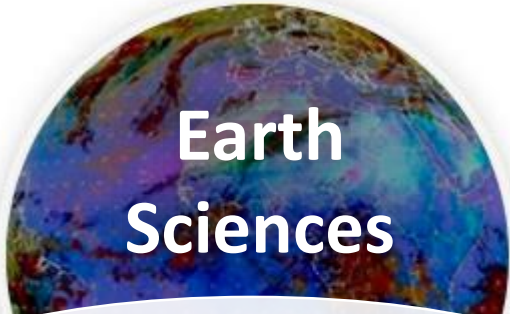

- Improved Healthcare
- Superior Materials
- More Competitive Industry
- Big data and data analytics
- Better Climate Forecasting

# Mission of BSC Scientific Departments

## Computer Sciences

To influence the way machines are built, programmed and used: programming models, performance tools, Big Data, computer architecture, energy efficiency

## Earth Sciences

To develop and implement global and regional state-of-the-art models for short-term air quality forecast and long-term climate applications

## Life Sciences

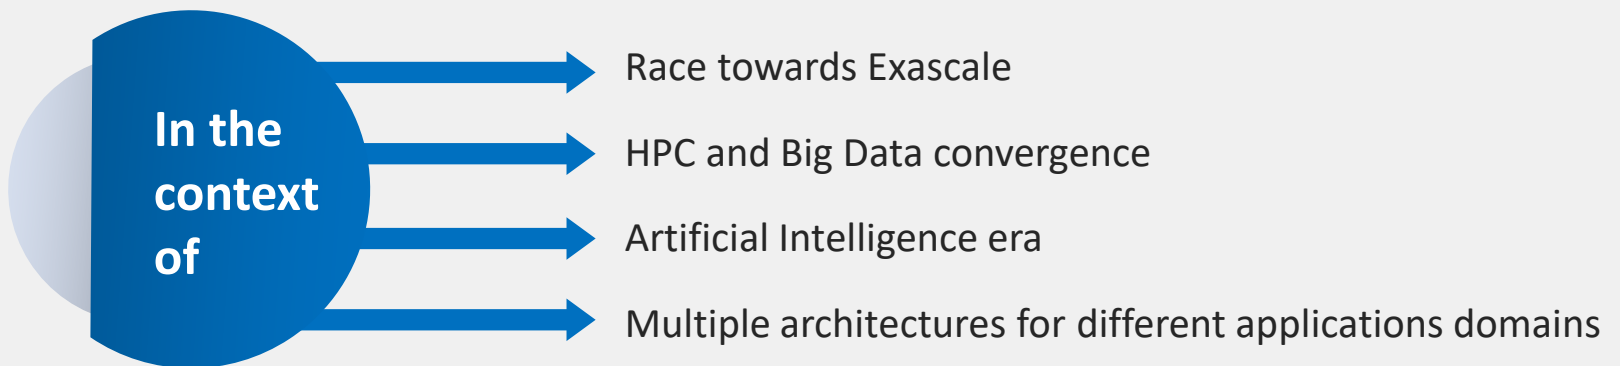

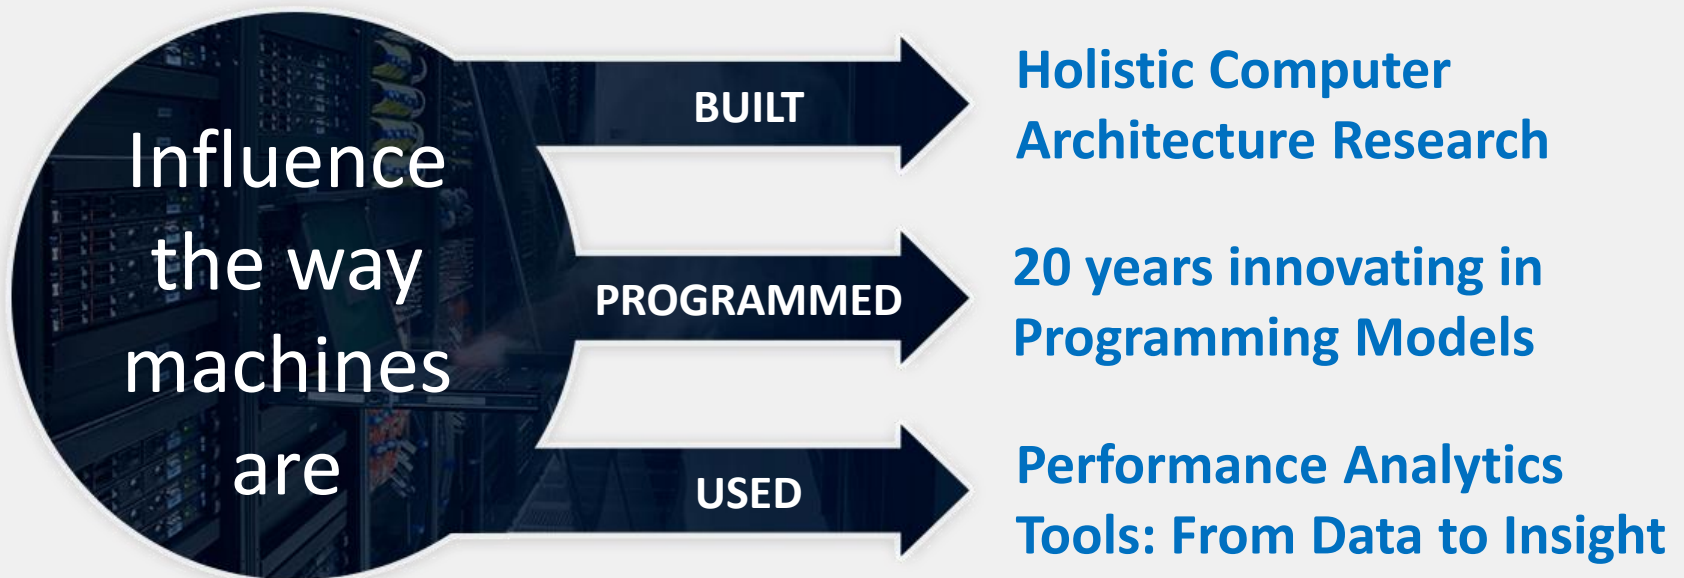

To understand living organisms by means of theoretical and computational methods (molecular modeling, genomics, proteomics)

## CASE

To develop scientific and engineering software to efficiently exploit super-computing capabilities (biomedical, geophysics, atmospheric, energy, social and economic simulations)

# Computer Sciences

# Earth Sciences

Environmental modelling and forecasting, with a particular focus on weather, climate and air quality

## Service Users Sectors

Infrastructures

Solar Energy

Urban development

Transport

Wind Energy

Agriculture

Insurance

# Life Sciences

## Computational Genomics

Design, development, and use of bioinformatic protocols and tools in the context of comparative genomics and analyses of gene and protein collections.

## Protein modelling and drug discovery

Theoretical and computational approaches to protein interactions, and study of complex biochemical processes at electronic and atomic theoretical detail.

# CASE

**Our mission is to develop computational tools to simulate highly complex problems and that exploit efficiently the supercomputing capabilities**

Energy Industry

Aeronautic and automotive Industry

Aerodynamics

ATM in dust conditions

Composite materials

Innovative Manufacturing

Biomechanics (cardiovascular system,  
respiratory system)

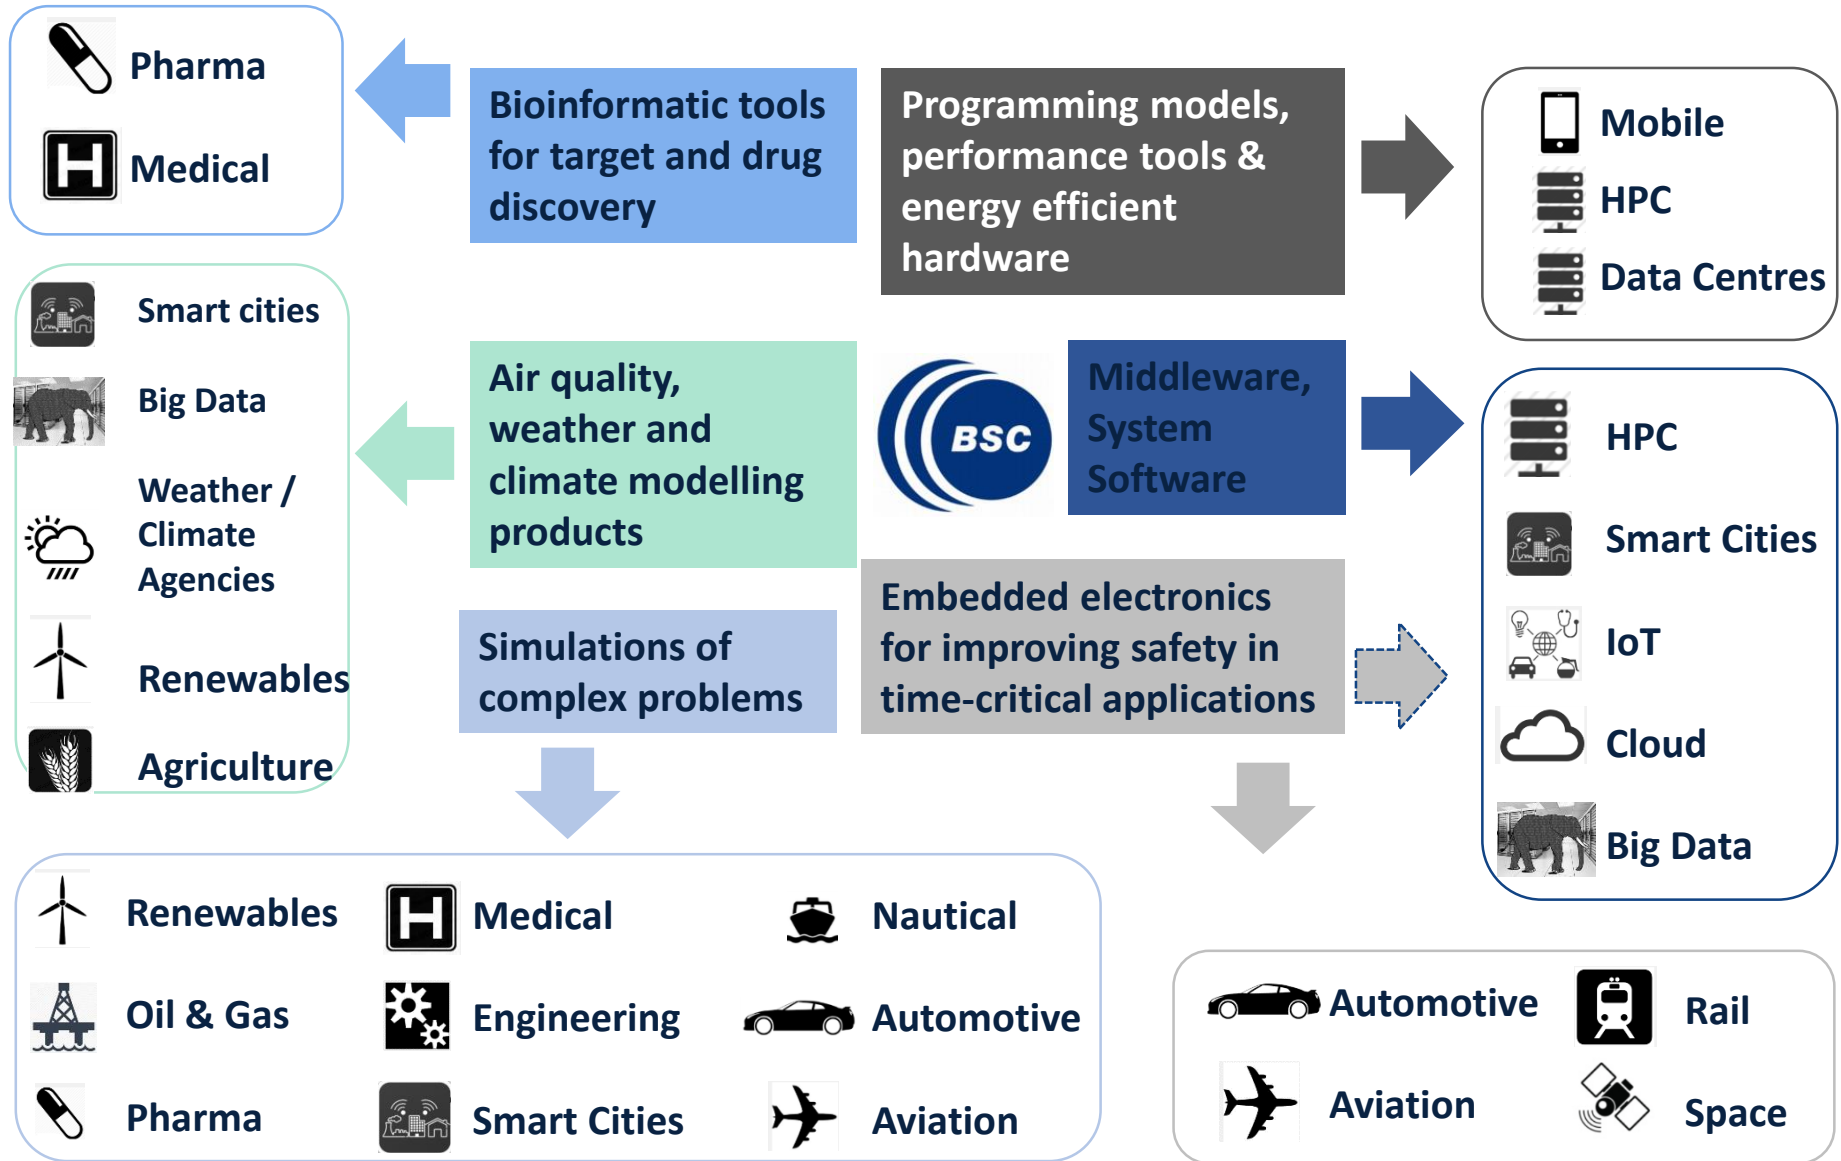

Smart Cities

Agent-based models

# How to Collaborate

- Customised R&D projects with companies
  - Joint Research Centers
  - Multi-Annual Framework Agreement
  - Customized R&D projects
  - Industrial PhD
- Accessing BSC technologies through licenses
  - To our Patent Portfolio
  - To our Software Portfolio
- Service Platform
  - **Pay per Service (computational genomics, air quality, big data)**
  - **Software as a Service**

# Success stories

## Climate projection for a Spanish wine Company by Earth Sciences Services

After request of a winemaker interested in identifying potential sites for grape plantation in the South America, we performed an analysis to identify if and where it will be possible to grow grapes in 2050. Six wine indices accounting for climate projections of temperature and precipitation were used in the assessment.

### Partners and collaborators

### Projects

# First BSC's Spin Off

**Nostrum Biodiscovery: How a drug finds its target**

# PELE transferred to market

Nostrum Biodiscovery aims to help its clients speed up the first stage of drug development

*“it is estimated that the approach used by Nostrum BioDiscovery can reduce the early-stage drug development by up to **two years** (the discovery phase prior to pre-clinical trials) and cut costs by 15-20% in this first phase, **implying an estimated saving on average of 40 million euros.**”*

Experience and cutting-edge supercomputational technologies:  
PELE, ED/MD, MDWeb, MoDEL

# Service Platform

**AIR QUALITY**

**CLIMATE**

**MINERAL DUST**

**COMPUTATIONAL GENOMICS**

**HPC PERFORMANCE ANALYSIS  
AND OPTIMIZATION**
